Week 9 Exercise: Prototyping on Paper

Martin Verrev

martin.verrev@taltech.ee

Assignment

Draw a mobile application for reporting and submitting both water and gas meter measurements to a landlord or a housing cooperative by a tenant in an apartment.

The user can:

- Change settings - for instance change personal details; housing cooperative e-mail address etc.
- Submit the meter readings.

Assume that authentication is implemented with Oauth, e.g. Google Auth - meaning there is no need for registration screens.
